

IMMUNISATION IN THE REAL SENSE

The Homoeopathic Heritage

By

Dr. Mridula Gopinathan

Health & Disease

- ◆ Heredity
- ◆ Adequate exercise, yoga, physiotherapy, right choice of profession
- ◆ Use of adulterated air, water, food → diminished vital force/ resistance
- ◆ Medicines & vaccination

Why is Vaccination harmful ?

- ◆ Vaccination- action of vaccines on the liver
- ◆ Clinically observed that liver is the 1st organ to get deranged in vaccinated children → loss of appetite, weakness, lethargy
- ◆ Dr. Moskowitz → R/A of shingles, slow virus diseases such as Crutzfeldt- Jacob disease, Gullain –Barre syndrome, Tumours
- ◆ Prof. Simpson → immunisation programmes seed humans with RNA to form latent provirus in cells thruout the body
- ◆ Provirus are molecules in search of ds; when activated cause RA,MS, SLE, Parkinson's ds, CA

Effects of certain vaccines

- ◆ DTP → S.I.D.S , neurological damage , MR, Seizure disorders, visual, auditory, speech, infantile dyspepsia, hemiplegia/paraplegia
- ◆ Measles vaccine → immuno-reactive diseases, sebaceous skin diseases, degenerative skin ds, deg ds of bone cartilage, tumours, chondromalacia, SLE, scheuermann's ds
- ◆ Does less no. of cases of wc, asthma, primary complex, leukemia mean healthier children?
- ◆ Does immunisation lead to deeper incurable ds ? Converse of Hering's Law of Cure

Homoeopathic Immunisation

- ◆ Starts with pre-natal care
- ◆ Treatment of the 3 miasms
- ◆ Prenatal treatment ensures that the unborn baby does not inherit hereditary taints
- ◆ Baby has strong immune system
- ◆ Homoeopathic prophylactic given to further strengthen immune system during epidemics
- ◆ Prophylactics act in a preventive & curative manner; no danger of reaction even after exposure

Dr. Mathias Doresi's plan of prenatal treatment

Month of pregnancy	Remedy
1 st	Tuberculinum 200
2 nd	Syphilinum 200
3 rd	Carcinosin 200
4 th	Sulphur 200
5 th	Calc carb 200
6 th & 7 th	Calc. fluor / Calc.phos 6

Prophylactics

Disease	Prophylactic
Whooping cough	Pertussin
Diphtheria	Diphtherinum
Polio	Lathyrus sativus
Chicken pox	Varicillinum
Measles	Morbillinum
German measles	Rubella
Malaria	Malaria officinalis
Mumps	Parotidinum
Small pox	Variolinum & Thuja

Role of Anti-miasmatic drugs

- ◆ For real cure , suitable miasmatic drug must be given

Anti-miasmatic drugs	Diseases
Tuberculinum	TB, asthma
Bacilinum	Eczema/ skin ds
Carcinosin	Cancer, tumours, DM
Thuja	Variolinum, Pox

TB & B.C.G

- ◆ Not every baby is immunised against TB even if a parent is tuberculous
- ◆ TB not inherited since no germs of the ds traceable in the neonate
- ◆ Baby has a predisposing constitution which weakens immunity → more susceptible to TB
- ◆ ∴ Not a particular ds but a constitution is inherited
